Education:
• Bachelor's Degree in System Analysis - Faculdade de Tecnologia de Americana (FATEC) – 12/2018.

Languages:
• B2 English
• Fluent Portuguese

Employment History:

Invillia - Current position
Senior Front-end Developer

• Develop and implement an exceptional operations experience using React, TypeScript, modern JavaScript features, and semantic HTML.

• Proficient in JavaScript testing frameworks like Jest.

• Expertise in CSS in JS, such as styled-components.

• Building React components for a Design System following wireframes description and focusing on user experience, performance, using atomic design and best practices.

• Experience using storybook to display components, properties, unit tests, knobs, and documentation.

• Working within a Continuous Delivery and Agile environment (Scrum methodology).
• Expertise in disaster recovery environments.

BEES - 03/2020 to 03/2022
Front-end Developer

• Assisted in developing a new B2B buying experience globally in the beer market using React.

• Coached junior and mid developers through sprints, acting as a senior developer to help them build, test, and follow the best development practices.

• Created a CLI that saved time and money by making it easier to set up a local environment for the developer's work, not worrying about which process he should do and how to do it, so every new developer in the project could use it quickly.

• BEES Partner: An application used by partners to manage everything related to their products (from warehouses to orders and invoice management) built using a micro-front-end architecture with a high focus on quality.

• BEES Customer: An application with more than 2 million users and live in more than 10 countries.

• Work in a global e-commerce platform using React JS, Redux, TypeScript, modern JavaScript features, semantic HTML, and NextJs for SSR.

• Experience working with microfrontend architecture.

• Proficient in JavaScript testing frameworks like Jest and Enzyme.

• Expertise in CSS preprocessors and styled-components.

• Building React components for a Design System following wireframes description and focusing on user experience, performance, using atomic design, and best practices.

• Experience using storybook to display components, properties, unit tests, knobs, and documentation.

• Working within a Continuous Delivery and Agile environment (Scrum methodology).

• Experience with distributed version controls systems like Azure DevOps and JIRA as the project management tool.

• Experience with scripts creation for automation using tools such as Docker.

• Expertise in security coding guidelines, HIPAA, and web accessibility (a11y).

Venturus - 07/2019 to 03/2020
Front-end Developer

• Responsible for the front-end part of the projects using technologies such as ReactJS, Angular 8, ES6, multiple third-party libraries, git, and other technologies.

• Developed artificial intelligence for projects using the Unreal 4 platform, as well as building screens and the logical part of them.

Audaz - 03/2019 to 07/2019
Front-end Developer

• Developed websites using the Mobile First technique, with the help of preprocessors such as CSS, JavaScript, HTML, PHP, SCSS, and Gulp, using WordPress as CMS.

Antidesign - 02/2016 to 07/2019
Front-end Developer

At Antidesign, I handled Front End development for various websites using SCSS, CSS, HTML5, PHP, JavaScript, and WordPress. I am proficient in these technologies, as well as JavaScript frameworks and libraries such as AngularJS and jQuery. Additionally, I have experience with Offline First methodologies and Progressive Web Apps. All sites I developed were responsive, ensuring adaptability to any screen size. I prioritized creating a smooth and efficient user experience, while also optimizing SEO and page loading speed. Lastly, I utilized WordPress for administrative tasks and created custom plugins to meet user and administrator needs.
